

Report 3: Cybersecurity Threats in 2025

Prepared By: [Cybersecurity Team]

Date: [Insert Date]

1. Introduction

With increasing digital threats, this report highlights major cybersecurity risks anticipated in 2025 and strategies for mitigation.

2. Top Threats

- Ransomware attacks on enterprises.
- AI-powered phishing scams.
- Increased vulnerabilities in IoT devices.

3. Mitigation Strategies

- Strengthening multi-factor authentication (MFA).
- Employee cybersecurity training programs.
- Regular security audits and updates.

4. Conclusion

Organizations must proactively implement security measures to mitigate evolving threats.
